### HEAD AND NECK SURGERY

Elec.	Emer.	App.	Den.	
—	—	—	—	Tonsillectomy
—	—	—	—	Adenoidectomy
—	—	—	—	Tracheostomy
—	—	—	—	Tracheotomy
—	—	—	—	Excision of lesions, limited - cysts, superficial skin lesions, etc.
—	—	—	—	Excision of lesions, major:
—	—	—	—	Parotid surgery including nerve dissection
—	—	—	—	Parathyroid
—	—	—	—	Oral tumors including tongue
—	—	—	—	Pharyngectomy
—	—	—	—	Laryngectomy
—	—	—	—	Maxillofacial:
—	—	—	—	Extractions
—	—	—	—	Jaw and oral cavity, except malignancy
—	—	—	—	Fracture of jaw
—	—	—	—	Uncomplicated nasal fractures
—	—	—	—	All facial fractures, open and closed
—	—	—	—	Other: _____

## OPHTHALMIC SURGERY

[illegible]

- Enucleation
- Extenteration
- Plastic repair
- Orbital tumors and explorations
- Lacrimal surgery
- Eyelids, repair minor lacerations
- Extraocular:
  - Corneal, foreign body, superficial
  - Corneal, foreign body, central or deep under slit lamp
  - Eye muscle surgery
  - Ptosis surgery
- Lens
  - Cataract removal
  - Intraocular lens implantation
  - Iris surgery, including glaucoma
- Retinal:
  - Retinal detachments, scleral buckling, etc.
  - Photocoagulation
  - Cryoplexy
- Other: \_\_\_\_\_

**Other:** \_\_\_\_\_

Elec.   Emer.   App.   Den.

Figure 1 displays a 4x4 grid of 16 grayscale images showing the degradation of a handwritten digit '4' from left to right and top to bottom. The images are labeled 1 through 16. The degradation is caused by a combination of salt-and-pepper noise and a 2D Gaussian blur kernel. The noise level increases from left to right, and the blur kernel size increases from top to bottom. Image 1 is the original, sharp digit. Image 16 is the most degraded, being very blurry and noisy.

Excision of cyst or tumor  
Incision and drainage of abscess  
Mastectomy  
    Simple  
    Radical  
    Modified  
Reconstructive surgery  
Other: \_\_\_\_\_
